Unlock True Health

All living foods have enzymes in them. Enzymes break down food into micronutrients so your body can better absorb them. When we cook food, we deactivate these naturally occurring enzymes and require our body's supply of enzymes to do all the work.

Relying on your body to do all the work can lead to indigestion, bloating and sluggishness. Some enzymes aren't produced in the body at all, meaning that you may be missing out on a lot of the nutrient benefit from your food.

Taking [Life] with each meal unlocks the nutrient potential in your diet. Plus, [Life] makes your favorite foods much more enjoyable by helping to reduce common indigestion problems.*
